SportsWareOnline

Accessible From MACs and PCs
I-PAD & Other Tablets and from
I-Phone & Other Smart Phones

Access Your Athletic Training Room Records From Any OnLine PC, Mac, or Smart Phone with SportsWareOnline

Electronic Medical Records Software makes it easy to record, manage, and report athlete medical information. And the new SportsWareOnline application makes it even easier because it gives the Athletic Trainer the ability to record, manage, and report athlete information from most Internet-connected PCs, Macs, or Smart phones.

Accurate Record Keeping in Healthcare is a Must

The Athletic Trainer is an important provider of healthcare and one of the most important responsibilities of all healthcare providers is accurate and complete documentation of all services provided. If it is not written down, it did not happen. **SportsWare**, the most popular injury tracking program since 1991, provides the Athletic Trainer with the framework needed to record, manage, and report accurate and complete records of all services provided to his or her athletes.

SportsWareOnline makes the process of record keeping efficient with the ability to access and share records via the internet. And the Athletic Trainer needs this efficiency. In addition to providing care and documenting the care provided, Athletic Trainers have to communicate their findings, treatment plans, and summaries with athletes, parents, staff members, coaches, nurses, athletic directors, physicians, and team scouts.

SportsWareOnline includes the following databases: Athletic, Injury, Treatment, Sign-Out, Medication, Insurance, Physical, Referral, Doctors Orders, Surgery, Insurance, Inventory, Equipment, History, Weight, and Phone.

Internet Access
Mac or PC
Tablet
Smart Phone
(touch screen preferred)

Since 1991 more Athletic Trainers have relied on SportsWare than any other program. CSMi is committed to the continuous development of software products that improve the recording, managing, and reporting capabilities in the athletic training room.

Pre-Participation Module Saves Time & Expense

One of the challenges every Athletic Trainer faces is collecting and keeping current athlete address, emergency contact, physician, insurance, medical alert, and health history. **SportsWareOnline** solves this problem with the new **Pre-Participation Module (PPM)**. PPM allows athletes and their parents to log into the program and enter or update their information instead of the Athletic Trainer. What takes minutes for the athlete or parent to do online saves the athletic trainer time and money sending out and collecting the information via paper forms and then manually entering data into a computer.

Injuries Surveillance

In addition to professionally managing injuries **SportsWareOnLine** can help you prevent Injuries via our **SportsWare Injury Surveillance Program (SISP)**. For those that decide to participate the SISP will collect nationwide high school and college injury data for users to compare their injury rates against. Armed with this information Athletic Trainers can make informed decision about injury prevention opportunities. In addition, SISP includes the ability for individual schools and leagues to pool their data to facilitate a local Injury Surveillance Study. And since **SportsWare** has the largest pool of users the SISP is destined to be the largest High School and College Injury Surveillance Program in the country. There is no charge for current **SportsWareOnLine Users** to participate in SISP.

Options

Quick Treatments - What if your athletes signed directly into **SportsWare** instead of a sign-in sheet? With **SportsWare QuickTreatments** they can. **SportsWare** flags all athlete-entered records for your approval at the end of the day.

SAC-TRAC Concussion Module - The Standardized Assessment of Concussion (SAC) is an industry standard used to obtain baseline and post-injury measurements in athletes. Record and track Standardized Assessment of Concussion (SAC), Standard Symptoms Checklist, and Balance Error Scoring System (BESS) results in SAC-TRAC by CSMi.

Whether you work in the high school, university, hospital, private clinic or professional team setting, if you work with athletes, you should be working with SportsWare.
