

**PRB: You start SportsWare2006 and the program reports “Error Your SportsWare2006 Database has the Same Name”.**

### **SYMPTOMS**

You start SportsWare2006 and the program reports “*Your SportsWare database has the same filename (SW2006.MDB) as the default installation database*”.

### **CAUSE**

During installation SportsWares loads a demonstration database called SW2006.MDB. The first time you start SportsWare it copies the database to SportsWare2006.MDB. If the SportsWare2006.MDB file has already been created and you open the SW2006.MDB file, SportsWare reports this error.

### **RESOLUTION**

1. Start SportsWare and click the **OK** button when you see the error message.
2. SportsWare will display **C:\Program Files\SportsWare2006\SW2006.MDB** in the status bar at the bottom of the screen.
3. Reivew the data to confirm this is your current database. If you have just installed SportsWare you will see the default athletes shipped with SportsWare.
4. Exit SportsWare.
5. Select **Start, My Computer**.
6. Go to the **C:\Program Files\SportsWare2006\Data** folder.
7. Single-click the **SportsWare2006.MDB** file to select it. (Your computer may or may not show the .MDB extension).
8. From the **File** menu, select **Rename**.
9. Rename the file to **OLDSportsWare2006.MDB**.
10. Re-start SportsWare. SportsWare will copy the **SW2006.MDB** file to **SportsWare2006.MDB**.

### **STATUS**

The above steps resolve this problem.
